

CONTENTS

- Introduction
- Objectives
- Electrostatic wave Model of power cables
- Structure and Location of partial discharges in power cables by electric and magnetic field measurements
- Estimation of PD index for roads of different sizes
- Detection and location of partial discharges by travelling wave method
- Conclusion
- Future Scope
- Acknowledgement

Background of the problem 10

A Public Exchange (PE)

- A limited liability entity in Delaware (Rosen, 1995)
- Similar to LLC, general partners in most investment business, limited liability for the investors as a PE
- Have the right to buy or sell, or transfer, an interest in the PE within the investment PE
- The effect is different PE structure in the eyes of the law

Thank
you

Summary

- The critical importance of reliability for today's industry
- The need for a non-contact measurement technique for current and voltage in a wide range of frequencies
- Current reconstruction from magnetic field using
 - Spherical harmonic expansion to handle 3D fields
 - Tikhonov regularization to handle the ill-posed problem
- Cramer-Rao lower bound of inverse problem
- Advantages:
 - Flexibility and mobility in measurement
 - Measuring high frequency currents
 - Measurement does not affect on the operation system
