Description

Convert HOPE to python for cross-platform use

1. Basic functionality with 5 levels
    1. Scanning is a process that waits for events, sleeps for ms inside a while loop.
2. Configuration file that
    1. sets the speed
    2. stores word and sentence lists (adds new words/sentences if spelt)
3. Prediction capability
    1. Reads word and sentence lists into a tree
    2. Predicts next alphabet (in spell mode) or word (in word mode)

History

#1 - 03/20/2010 12:00 PM - Albina Nirupa Julius

Tested Hope in Beagle board with Ubuntu .Pyttsx speech module stops working in beagle board after few minutes.
Need to test in Angstorm

#2 - 04/26/2010 11:21 AM - Albina Nirupa Julius
